SUMMARY

Lead Software Engineer who owns production AI platforms end to end. Most recently sole code owner of ACERO/Capri, a seven-service GCP document-intelligence and agent platform delivered from inception to production in 28 weeks: multi-tenant ingestion, Gemini extraction with human-in-the-loop review, golden-data evals (quantity recall 37% to 99%), semantic retrieval across 26,000 documents, and a governed MCP/agent layer of 40 tools. Five years building full-stack, cloud, and AI systems for enterprise clients in Python/FastAPI, TypeScript/React, and GCP/AWS.

EXPERIENCE

Lead Software Engineer | Ollon (Software Consultancy)

Nov 2021 – Present

ACERO / Capri – AI Document Intelligence & Agent Platform

GCP, Python, FastAPI, React, TypeScript, Gemini, MCP, PostgreSQL/pgvector, BigQuery, Cloud Run, Terraform

- Primary technical owner and sole repository CODEOWNER of a seven-service, three-environment platform; delivered from inception to live production in 28 weeks, landing 429 merged PRs.
- Architected multi-tenant ingestion of PDF, XLSX, and Google Sheets through Gemini extraction, confidence scoring, human review, and system-of-record delivery; 14/14 validated production pushes with zero orphaned records.
- Built golden-data evaluation harness that raised quantity recall from 37% to 99% and reached 96.3% precision at 91% coverage on a difficult taxonomy-mapping field.
- Designed semantic retrieval across 26,000 historical documents (99.98% embedding coverage) and a governed MCP/agent architecture: 40 tools, 21 BI views, tenant and principal isolation, audited queries, source-grounded answers.
- Hardened CI/CD, schema safety, and release controls; cut CI runtime 52% and local unit-test feedback from 10.5 minutes to 15.6 seconds.

Stellantis – AI Contract Intelligence Platform

GCP, Python, RAG, vector embeddings, Document AI, Terraform, PostgreSQL/pgvector

- Built pipeline that ingested and indexed 1,000+ vendor contracts into a vector-searchable knowledge base, reducing contract search time by 90%.
- Developed MCP server for semantic search and natural-language queries over contracts, plus automated portfolio reports covering spend, obligations, and risk.

Green & Spiegel LLP – Immigration Case Management Platform

React, Express, MSSQL, Docker, AWS ECS, S3, CloudFront, WAF, Cypress

- Led a five-person team on a $1M+ engagement; launched a multi-tenant platform used by global law firms.
- Delivered a schema-driven dynamic form engine that lets non-technical staff design intake workflows, reducing manual legal review by hundreds of hours per month.

Selected additional client work

Knighthead Capital (governed reinsurance treaty workflows and secure Next.js data layer for underwriting) · Credit Suisse (Okta/Azure AD SSO rollout for 1,000+ users) · Sinalite (Terraform multi-region AWS migration) · APR (workflow automation with Document AI extraction and conversational BI over BigQuery)

Software Engineer (Internship) | AltumView Systems

Jan – Dec 2020

- Built an AI-powered fall-detection system for a healthcare IoT startup across the React UI and application logic.

EDUCATION & CERTIFICATIONS

BSc Computer Science – Simon Fraser University

Aug 2021

AWS Certified Solutions Architect – Associate (2025–2028)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL
AI/LLM: RAG, agentic systems, MCP, evals, Gemini, embeddings, pgvector, vector search, prompt/schema pipelines
Backend/Frontend: FastAPI, Node.js, Express, React, Next.js, Tailwind, Cypress
Cloud/Data: GCP (Cloud Run, BigQuery, Pub/Sub, Document AI), AWS (ECS, S3, RDS), Terraform, Docker, PostgreSQL, MySQL, MSSQL
Identity/Security: OAuth 2.1/PKCE, OIDC, SAML, Okta, Azure AD
